

docomoSIM Edit your Access Point Name (APN) on iOS

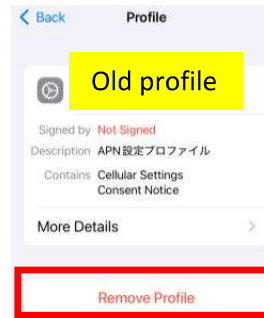

■ Introduction

Settings > General > VPN&Device Management

The iOS configuration profile can be

downloaded from Here.

Please Remove old profile if it already exists.

The URL where you can download the configuration profile ► <https://sim4.me/ppsim/>

The device may not function properly if other profiles are installed.

If this is the case, delete the other profiles and install the custom configuration profile from the URL above.

■ Next

You can view your APN settings in one of the following locations(Name of settings :depends on your iOS version)

•Settings > Cellular > Cellular Data Network

•Settings > Mobile Data > Mobile Data Options > Mobile Data Network

① Tap "Settings"

② Tap "Cellular"

③ Verify that the network is NTT Docomo and complete the setup.

docomoSIM Edit your Access Point Name (APN) on Android

① Press the Settings icon

② Press the Wireless and Networks button

※The model may affect the location, icon, and item name.

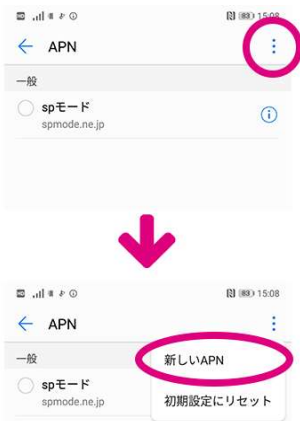

③ Tap the mobile network

④ Tap the name of the access point

⑤ Tap the icon in the upper right corner of the screen and select 'Add APN'

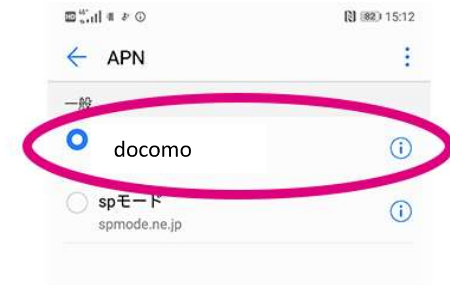

⑥ Fill out the necessary information on the Edit Access Point screen ⑦ Save

item	Input contents
Name	Any ※Example :JBSIM
APN	ppsim.jp
username	pp@sim
password	jpn
Authentication Type	PAP or CHAP

Other settings may be necessary in very rare case▶

⑧ Selecting the newly created APN item completes the configuration.

MCC=440 MNC=10

※Please note that depending on the model, it may take some time for the antenna to come up properly, or the setting may not be reflected until the device is rebooted.
If the antenna does not stand up, reset it and try to set it up again.
There are many cases of input errors that prevent antennas from going up.
